storing the table for managing address information on a file in the recording medium in response to a switch command from the host apparatus for switching to a write mode with use of the temporary record area, checks an empty area in the temporary record area or in the another record area with reference to the table stored in the memory, and notifies a write start address of the another record area to the host apparatus, as set forth in claims 1, 3 and 4.

Re claims 5, 7 and 8

The prior art of record alone or in combination does not teach or suggest the method fore recording data in to a recording medium having different transfer rates in accordance with record positions having the combination of steps with their recited process, along with releasing the temporary record area by transferring the data from the temporary record area to another record area having a lower transfer rate than that of the temporary record area during an idle period; reading the table in the recording medium into a memory in a recording/reproducing apparatus in response to a switch command from the host apparatus for switching to a write mode with use of the temporary record area; and checking an empty area in the temporary record area or in the another record area with reference to the table stored in the memory, as set forth in claims 5, 7 and 8.
